

Rowan County Register of Deeds latest in NC to implement new records management solution

WORTHINGTON, OHIO - February 17,2010

Cott Systems announced today that the Rowan County Register of Deeds office (North Carolina) is now utilizing the latest in records management technology, Resolution 3 software.

Rowan County Register of Deeds, John Brindle knew it was time for a new records management system. Not only was he looking for a solution to help make his office more efficient. he also needed to stay compliant with the North Carolina Indexing standards. "Resolution 3 software is everything it was promised to be. We knew we needed to make a change to keep up with state indexing standards, and we couldn't be happier with what Resolution 3 software has brought to our office", said Brindle. "The staff is happy because we eliminated the need to enter information into multiple systems. I am happy because all of our systems 'talk' to each other and we have now moved into the 21" century".

In the process of converting information from the legacy systems into Resolution 3 software, the Register of Deeds also felt it was a perfect time to remove unneeded information in their system, Years ago, social security numbers were indexed on the system for military discharges (DD214) and death certificates. Although social security numbers were never a searchable item on their system, Brindle felt they were no longer needed in their system moving forward. "We removed over 46,000 social security numbers from the system, Removing this information was just another step to ensure private information remain private", said Brindle.

The office is also looking forward as well, They are currently in the process of implementing eRecording which will allow title companies and banks to record documents in Brindle's office without having to man in or present the documents in person at his office, They are expecting to be able to begin accepting electronic recordings in the next couple months.

Resolution 3 software is now available for the entire state of North Carolina. The new system gives the register of deeds office a wide range of workflow options, and the opportunity to utilize new optional technologies and services like AutoRedaction for sensitive data, eRecording, eBackup (Disaster Recovery Service) and Web Hosting.
